FCRM Strategy - What do we want to achieve by 2050?

FCERM 2050 will help society, economy and environment to be resilient and prosper even with increasing flood risk and coastal change.

- Society acts to manage and adapt to flooding and coastal change
- Our environment is valued and helps to manage flooding and coastal change
- Our economy prospers even with flooding and coastal change

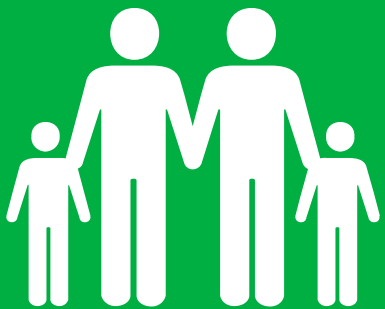

FCRM Strategy - 4 core questions

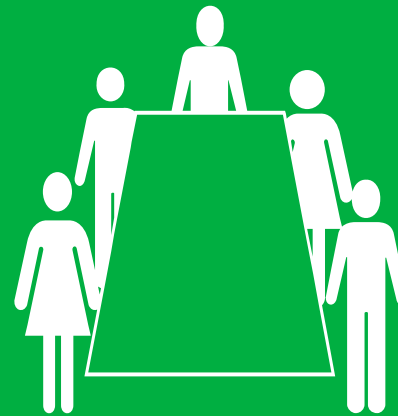

What do we all want to protect and how collectively can we fund it?

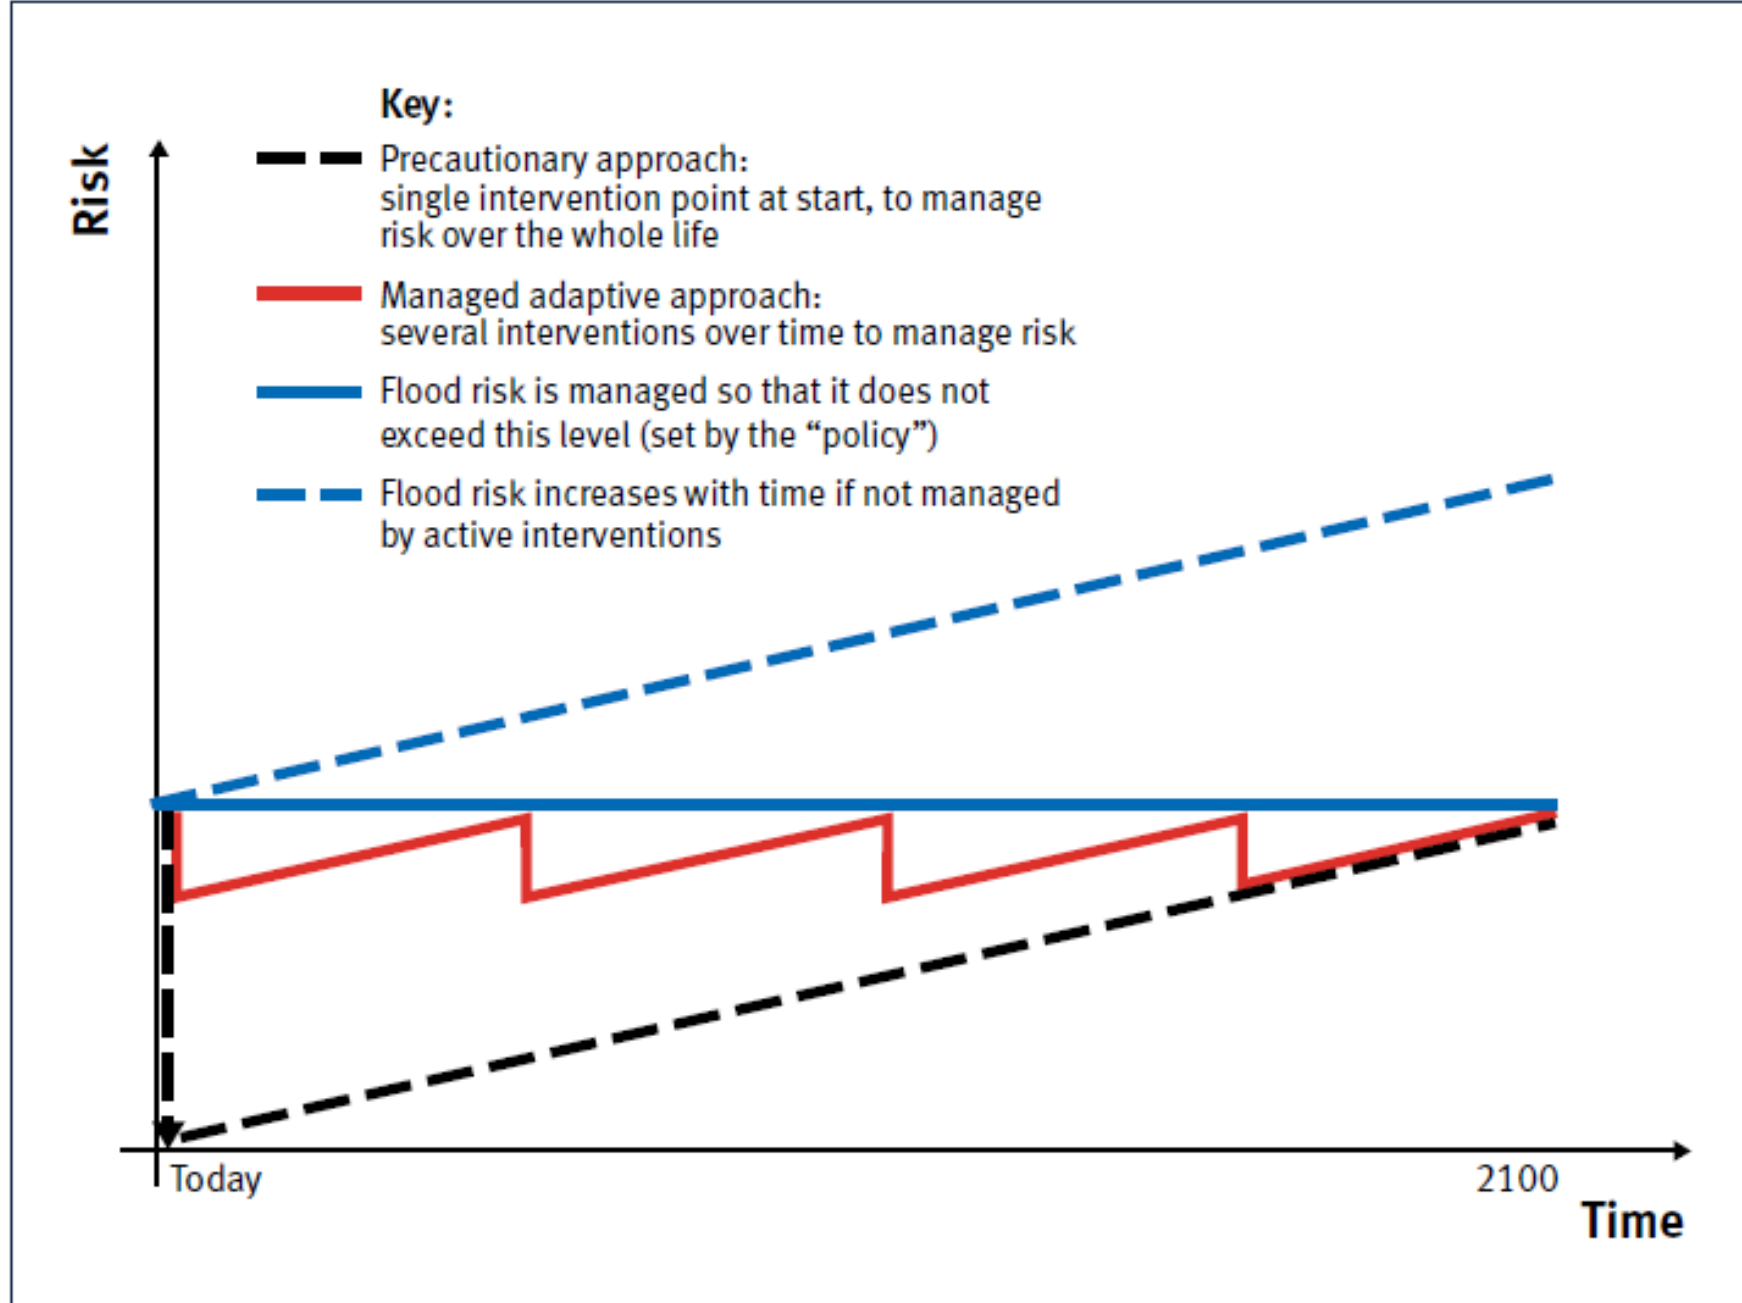

How can we ensure everyone puts water at the heart of their decision making?

What part do individuals, communities and businesses play? What should our expectations be of each other? How can we improve the way we work together?

How do we develop the current roles and responsibilities of professional partners to be effective, simple and clear?

Priority actions to improve resilience

Multi-functionality

Integrated water management

Lifetime resilience from the outset
